👤 PROFESSIONAL SUMMARY

Technical Lead with 11+ years of experience across Application Development, Production Support, Incident Management, Release Management, and Technical Leadership within Banking and Financial Services domains. Skilled in designing and developing applications using Java, ReactJS, SQL, and REST APIs, while also leading L2/L3 production support operations for business-critical applications. Experienced in troubleshooting complex production issues, optimizing database performance, implementing monitoring solutions, managing application transitions, and driving automation initiatives. Proficient in Snowflake, Oracle SQL, Unix/Linux, Splunk, Dynatrace, Grafana, ServiceNow, and Java with a strong focus on operational excellence, system reliability, and continuous improvement.

🧰 PROFESSIONAL EXPERIENCE

Technical Lead, *HCL Technologies (Client: bank of montreal)(App : RIS)*

06/2026 – Present
Noida, India

- Leading backend development and enhancement of the RIS application, focusing on scalable and reliable API solutions.
- Design, develop, and maintain Java-based backend APIs and application components based on business requirements.
- Implement enhancements and change requests in collaboration with business stakeholders and cross-functional teams.
- Analyze functional requirements and translate them into robust, maintainable, and production-ready backend solutions.
- Maintain and support UAT and BUAT environments, ensuring application stability and readiness for business validation.
- Troubleshoot production and application issues, perform root-cause analysis, and implement effective technical resolutions.
- Ensure high application availability and stability during peak business periods through proactive monitoring, support, and issue resolution.
- Collaborate with QA, business, Salesforce, and other technology teams to deliver enhancements within defined timelines.
- Perform code reviews, debugging, refactoring, and continuous codebase improvements while following development and version-control best practices.
- Provide technical leadership and application support, ensuring adherence to coding standards, release processes, and overall application reliability.

Technical Lead, *Application Transition (HCL → Ensono) (Client : State Street)*

05/2026 – 06/2026
Noida, India

- Leading end-to-end transition activities for ESP and SSCD applications from HCL Technologies to Ensono.
- Conducting KT sessions covering application architecture, monitoring procedures, support processes, and troubleshooting methodologies.
- Preparing operational runbooks, SOPs, support guides, and transition documentation.

- Facilitating shadow support and reverse KT sessions to ensure operational readiness.
- Coordinating with client stakeholders, development teams, and Ensono support teams for smooth knowledge transfer.
- Supporting transition governance activities, risk tracking, and stabilization planning.

Technical Lead, HCL Technologies (Client : State Street)(Application : SSCD)

06/2025 – 06/2026
Noida, India

- The SSCD application is an enhanced version of the ESP application, with upgraded technologies. Instead of SQL Developer, we now use Snowflake and Squirrel for database management. UNIX access and folder structure remain the same; however, deliverable monitoring is now performed through the UI and SQL queries
- Monitor all deliverables by considering client SLAs and SLOs, ensuring timely completion
- Coordinate with multiple upstream teams as data is sourced from various systems
- Actively monitor ServiceNow for alerts and tickets related to the application and ensure timely resolution.
- Proactively check for any job delays or bottlenecks, as most ITDs have limited buffer time.
- Collaborate with Development (DEV) and L4 teams during ongoing activities that may impact client deliverables.
- Manage and monitor deliverables for over 15 clients on a continuous basis.
- Create and optimize SQL queries to improve performance and achieve optimal results.
- Develop and enhance Grafana dashboards for SSCD deliverables to make them more user-friendly and informative.
- Identify potential areas for process improvement and automation to enhance system efficiency.

Technical Lead, HCL Technologies (Client : State Street)(Application : ESP)

01/2023 – 06/2026
Noida, India

- Look into and resolve problems that customers have reported, analyse system logs, error messages, and other pertinent information to find the source. Fix technical issues quickly and effectively.
- Provide prompt, efficient customer service across a variety of channels, including chat, email, and phone. Recognize the needs of the customer, feel their anxiety, and respond with precision and clarity.
- On the basis of severity, impact, and immediacy, manage and priorities incoming events. Make sure that set SLAS (Service Level Agreements) are followed, and use established incident management procedures to fix problems in accordance with predetermined timescales.
- Work with L1 Support teams to make sure that complicated or urgent issues are properly escalated. Engage with pertinent parties, like as development teams or outside vendors, to ask for help and plan the handling of issues.
- Contribute to the establishment and upkeep of a knowledge base by jotting down known problems, fixes, workarounds, and troubleshooting procedures. The support crew should collaborate and use the knowledge base as a resource when resolving problems.
- Follow-Up and Communication: Keep clients informed on the status of the issue resolution process on a frequent basis. Ensure prompt follow-up to guarantee client satisfaction and ticket closure.

- Gain a thorough comprehension of the good or service being supported. Keep up with the most recent features, improvements, and troubleshooting methods. Continually improve technical knowledge and abilities through training programmer and self-study.
- To report and address product flaws or enhancement requests, work closely with the development teams of software. Give accurate and thorough information regarding difficulties, and aid in problem reproduction and debugging.
- Look for ways to make workflows, tools, and support procedures better. Give feedback and ideas on how to improve the efficacy and efficiency of support operations.
- Maintain accurate and current records of support cases, including issue specifics, troubleshooting procedures, and remedies. Produce measurements and reports on customer satisfaction, team output, and ticket resolution times for the support department.

Technical Lead, HCL Technologies (Client : State Street) (Application : AIS)

02/2022 – 12/2022

Noida, India

- Gathered and analyzed the requirements and converted them into User Requirement Specifications and Functional Requirement Specifications for the designers and developers to understand them as per their perspectives.
- Handling user queries related to reports
- Daily job schedules/Database management and providing the solutions within the specified SLAS
- Participate in the team on the agile development cycle.
- Followed SCRUM methodology.
- Discuss with users and prioritize the issues (tickets) or enhancement for quarterly application releases.
- Managing risks and resolving challenges that impact release scope, quality, and schedules
- Planning release windows and cycles across portfolios, components
- Managing relationships working on interrelated processes
- Communicating crucial release plans and changes.
- Measuring and monitoring progress to achieve a timely software release within defined budgetary limits and defined quality standards.
- Worked closely with the Backend team to ensure smooth deployments by configuring different builds
- Used Snow ticketing tool to raise and managed change request
- developed Django forms to manage API requests
- Developed Admin forms to manage Admin credentials
- Provide support during User Acceptance Testing to Development team
- Create planned Change ticket and also assign change task to respective team
- testing all the module before prod deployment

Senior Project engineer,

01/2020 – 02/2022

Wipro Technologies (Client : State Street) (Application : DDP)

Greater Noida, India

- Developed high-Performance Customer DDP (Digital Design Portal), using React JS, React Hooks, React Router, JavaScript, HTML, CSS3, SASS, Bootstrap
- Build Custom Components for UX-library consisting Accordion, Filters, dropdown, Carousal, Button, Checkbox, input, Icons
- Developed Custom API Layer to Handle all CRUD transactions, and JWT token management and implemented interceptor to embed custom headers
- Maintained high-level Expertise in React state management strategies, including Redux, Redux Persist
- Exclusively used React-Hooks to handle application life-cycle process
- Worked closely with clients to establish specifications and system designs

- Used Middleware, Immutable in application to retrieve and store data from Back-End and to also perform RESTFUL services
- Effective use of native HTML, elements and custom tags to enhance SEO optimization and application ADA compliance feature
- Implemented CSS Box Model and styled web pages using CSS preprocessor SASS and effectively used mixins, functions, custom grid systems, grid-area concepts, and flexbox for fluid-responsive application
- Expertise in the usage of GitLab as version control and tracking units.
- Worked in Agile Methodologies for incremental development to deliver better application,

Software engineer, Wipro Technologies (Client : State Street)(Application : RSW)

07/2017 – 12/2019
Bangalore, India

- As the SME for the RSW application, I used to monitor the process, find resolution in case of a process failure and answer all the queries related to the application for the users.
- Determine the root cause of an issue during database or application process failure and provide the resolution as soon as possible to keep the production process without any impact.
- Analyze the Java code for user queries on the issues reported and specific functionalities for the application.
- Used to create and modify the stored procedures, functions, packages, and triggers for implementing required business logic.
- Design of UNIX shell script and automate the manual process handled by the users.
- Used the bulk collect and merge statement to do DML operations.
- Used to write complex SQL queries using Inline views, analytical functions, correlated sub-queries, joins, materialized views, etc.
- Unit testing of the Java programs.
- Interacting with customers to acquire and understand the technical requirements.

Student Computer Application,

06/2015 – 07/2017
Bangalore, India

Wipro Technologies (Client : State Street) (Application : ADR)

- Discuss, design, and code the application modules as per the customer's requirement and Cloud Framework standards.
- Explain and understand the needs of the client, 3rd party teams in triage calls and implement them.
- Good exposure to requirement gathering, understanding, and implementation with development teams.
- Feasibility check and impact analysis of requirement implementation, on the existing application process.
- Get back to the business and involve them in discussion to finalize modified or new process requirements.
- After internal discussion provides timelines for delivery of changes, estimated cost, and efforts.
- Prepare functional documents proposal and get the business review, approvals, and sign-offs.
- Provide understanding and clarification to developers and various operational teams to take up development.
- Conduct user Training/UAT via flow charts, presentations, and visual and audio calls to clarify their doubts.
- Provide workaround and temporary solutions in case of functionality-related issues/blockers.

Student Computer Application,

Wipro Technologies (Client : State Street) (Application : TMS)

06/2015 – 07/2016

Bangalore, India

- Perform system administration operations, such as user management, security settings, system backups, and software installations, on the AS00 platform.
- To ensure optimal system performance, keep an eye on the system's resource usage, work queues, and performance.
- Apply PTFs (Programmer Temporary Fixes), execute system checks, performance optimization, and other recurring maintenance chores.
- Plan capacity and carry out typical database chores including backup and recovery, monitoring, performance tuning, and tuning.
- Handle and fix issues with AS00 and DB2 that users have reported or that monitoring tools have found.
- To reduce downtime, troubleshoot and diagnose database and system problems, find their underlying causes, and offer prompt fixes.
- Join forces with users, developers, and other IT teams to look into and fix challenging or urgent problems.
- Keep thorough records of all AS00 and DB2 setups, processes, troubleshooting techniques, and best practices
- Engage users, stakeholders, and other IT teams in conversation to comprehend their AS00 and DB2-related issues and provide solutions.
- Support customers promptly and effectively, keep them informed of developments and solutions, and guarantee their pleasure.
- Keep up with new developments in AS00 and DB2 technology,
- Identify potential areas for process improvement and automation to enhance system efficiency.

EDUCATION

MTech, Birla Institute of Technology and Science
Master of Technologies in Computer Science,
6.90 GPA

2016 – 2019

Noida, India

BCA, Guru Gobind Singh Indraprastha University
Bachelor in computer application
79.13 CGPA

2012 – 2015

Delhi, India

12th Class, CBSE
Intermediate
53%

2010 – 2011

Delhi, India

10th Class, CBSE
High School
65%

2008 – 2009

Delhi, India

SKILLS

Web Technologies

(HTML, HTML5, CSS3, XML, JavaScript, WordPress, JSON, Bootstrap, React JS, Node.js, GitHub, JAVA)

Application Frameworks

(Spring Hibernate, React JS.)

Functional Domain Knowledge

(Securities, Bonds, Equities, Funds, portfolios, Trade processing, Reference data storage, Stock trading, Banking domain knowledge, General ledger, Trade buying/selling.)

Monitoring Tools

(Splunk, Dynatrace and geneos)

Development Tools

(Eclipse, VSCode and Notepad++.) Debugging tools: (Firebug, Chrome Developer Tools)

Programming Languages

(Core Java, Unix, RPG, RPGLE, CL, JavaScript, Autosys, Automation Bot Deployment, Cloud Fundamentals, Snowflake)

Databases

(Oracle, MySQL, SQL Server, DB2)

LANGUAGES

- English
- Hindi

INTERESTS

- Machine Learning
- Cricket
- Video Games
